

Utah-Wyoming EPSCoR Track 2 Grant

**CI-WATER: Cyberinfrastructure to  
Advance High Performance Water  
Resource Modeling**

# Water Demand

- Water is often a non-renewable resource
- Water demand in the Western US is surpassing available supplies

# Water Resource Management

- Increasingly sophisticated
- Requires innovative solutions
  - Conservation and re-use
  - Aquifer storage and recovery
  - Water rights/diversions

# Team Members

**Norm Jones, Jim Nelson, Gus Williams**

**David Tarboton, Jeff Horsburgh, David Rosenberg**

**Steven Corbato, Laura Hunter, Steve Burian,  
Christine Pomeroy, Courtenay Strong**

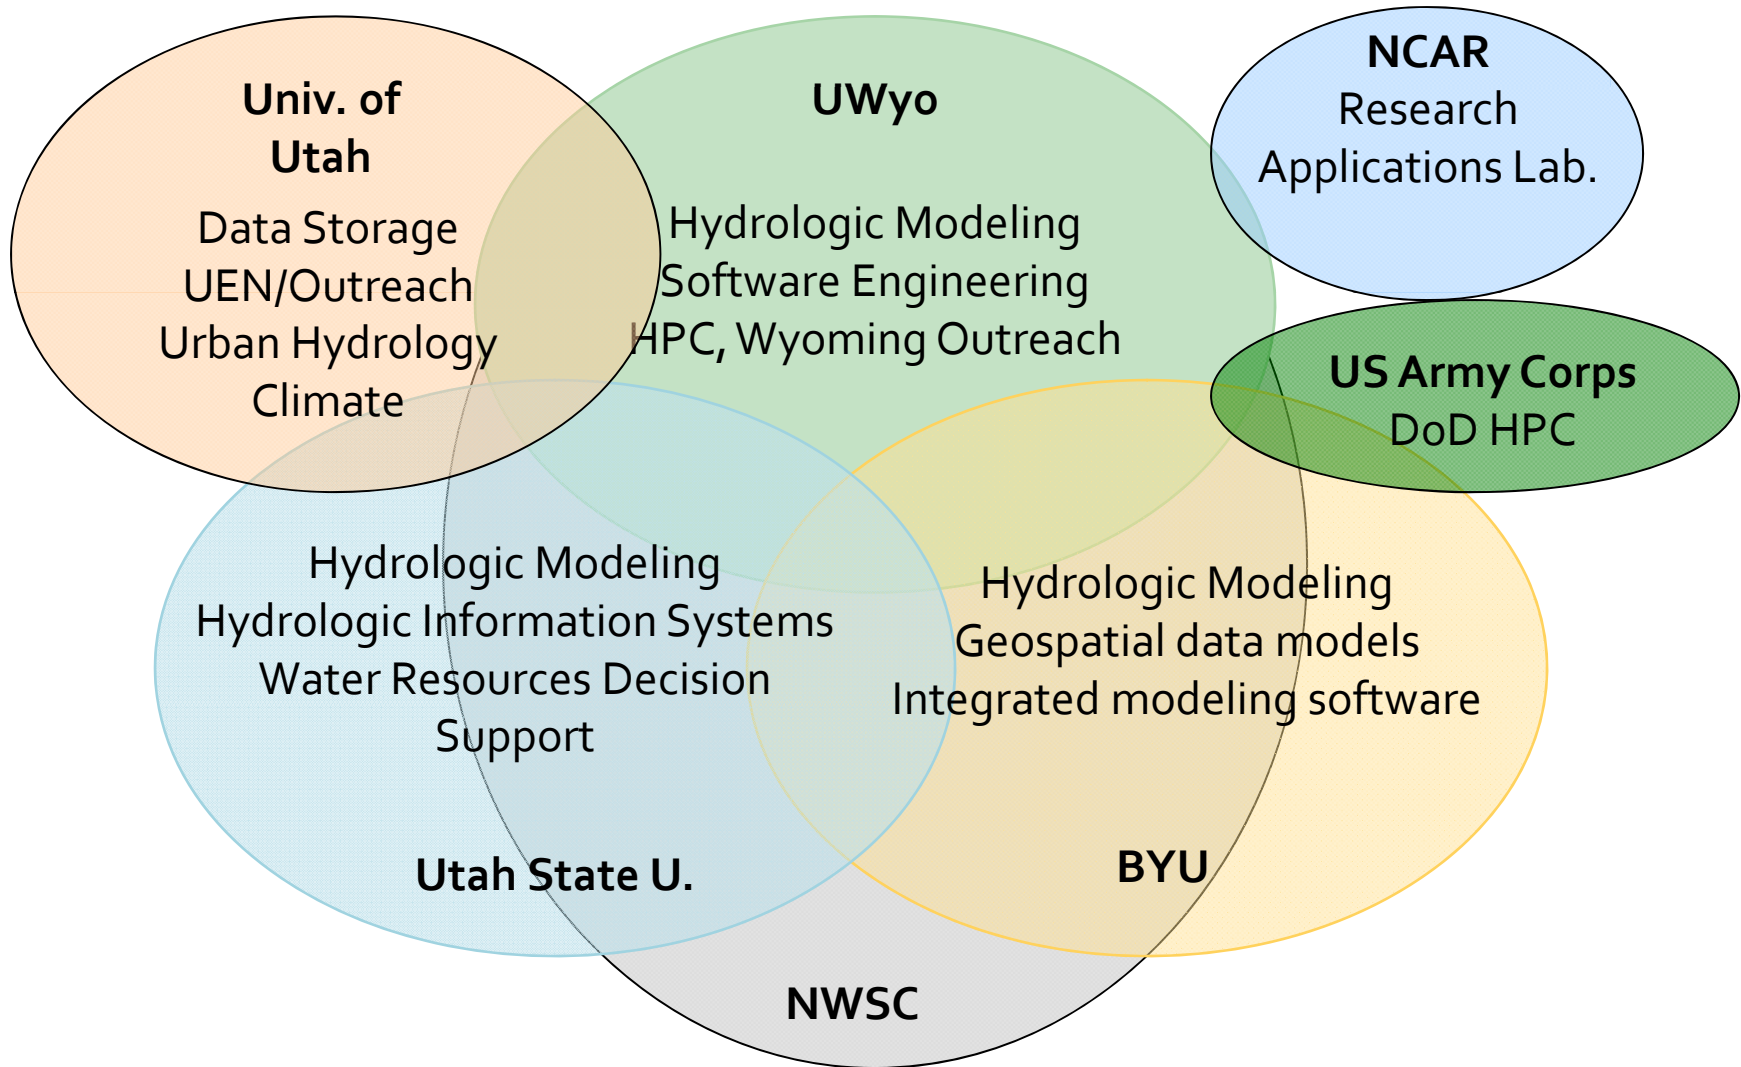

**Fred Ogden, Craig Douglas, Kristi Hansen, Scott  
Miller, Ye Zhang, Gi-Hyeon Park, Ginger Paige,  
Robert Aylward**

# Project Objectives

1. Enhance cyberinfrastructure facilities
2. Enhance access to data- and computationally-intensive modeling
3. Advance high-resolution multi-physics watershed modeling
4. Promote STEM learning and water science engagement

# Team

# Objective #1

Enhance cyberinfrastructure facilities

# Cyberinfrastructure

- Access to NWSC supercomputer
- New mid-level supercomputer at UWYO
- Disk farm at UU

# The NCAR-Wyoming Supercomputing Center (NWSC) provides dedicated *petascale* capabilities for geosciences.

For more information visit, [www.nwsc.ucar.edu](http://www.nwsc.ucar.edu)

## NWSC Partners:

## Architects, Contractors and Consultants:

H+L Architecture | Saunders Construction, Inc. | California Data Center Design Group | Rumsey Engineers | RMH Group  
Martin & Martin Consulting Engineers | Rider Levett Bucknall | Reliable Resources | E Cube, Inc.

# Wyoming's 20% Share of NWSC's **72,300** cores represents a huge increase in EPSCoR HPC capabilities...

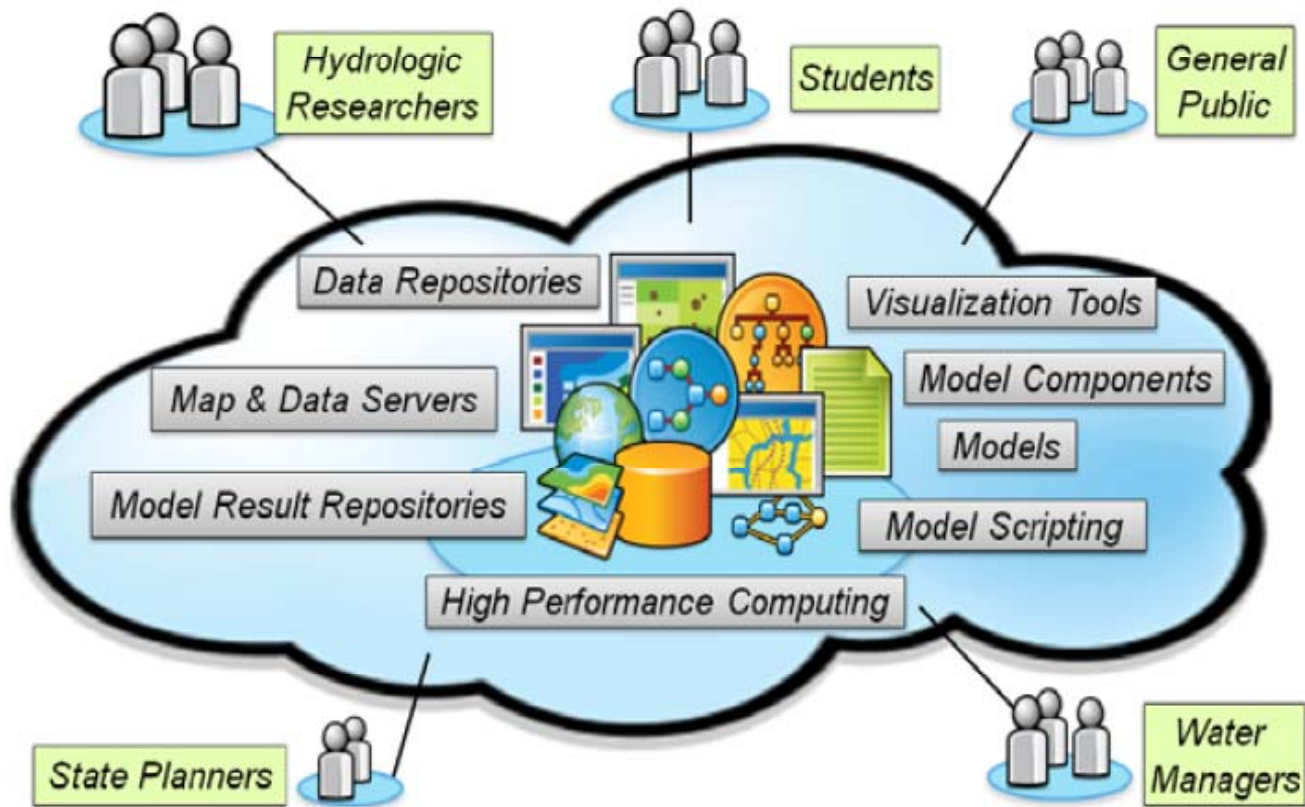

- On the latest (6/11) Top500 list of fastest supercomputers, Wyoming's share on NWSC-1 alone is estimated to be...
  - The 28th fastest computer in the world
  - The 14th largest supercomputer in the US
  - The largest system in an EPSCoR state outside of Department of Energy facilities
  - The largest resource controlled by a university in the US

Reference: <http://www.top500.org>

# Objective #2

Enhance access to data- and computationally-intensive modeling

# Enhance Access

Goal is to provide and use these tools to enhance the capacity for water resource planning and management in the Utah-Wyoming region

# Data Modeling and Services - USU

Consortium of Universities for the Advancement of Hydrologic Science, Inc.

- 110 US University members
- 6 affiliate members
- 12 International affiliate members (as of March 2009)

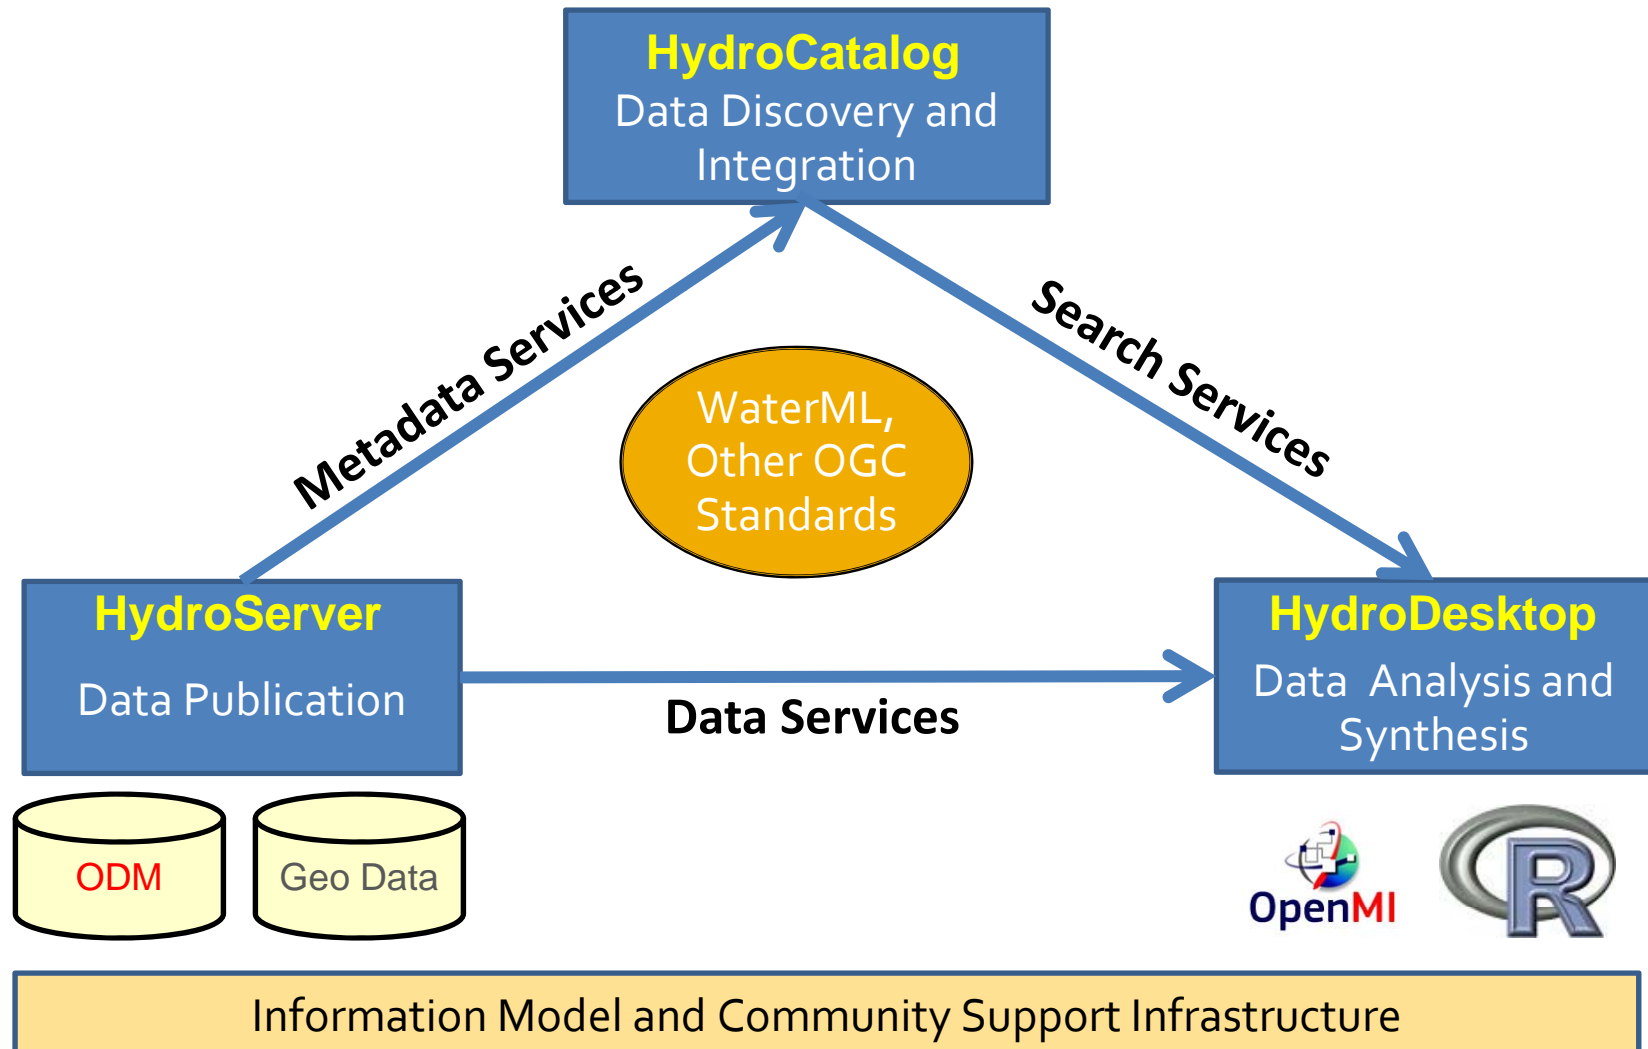

An organization representing more than one hundred United States universities, receives support from the National Science Foundation to develop infrastructure and services for the advancement of hydrologic science and education in the U.S.

<http://www.cuahsi.org/>

# CUAHSI Hydrologic Information System (HIS) Services-Oriented Architecture

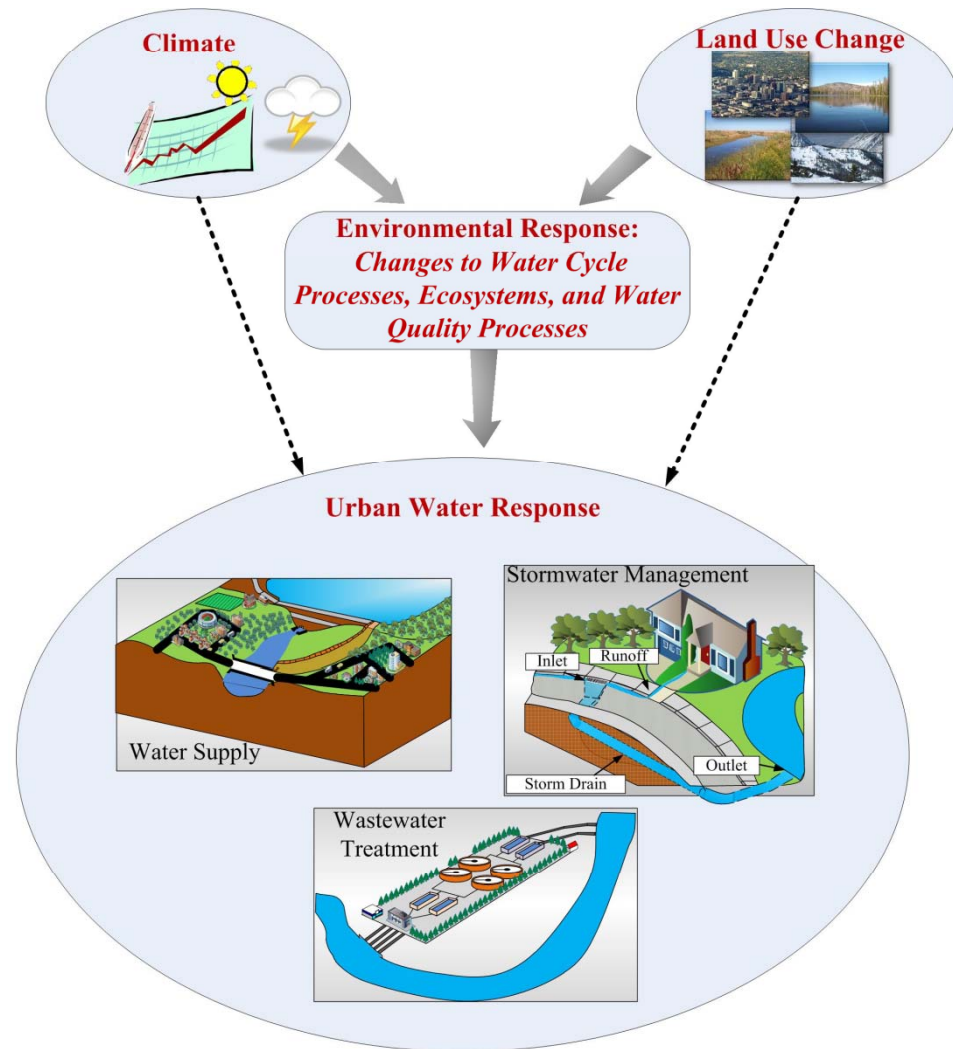

# Climate and Urban Modeling - UU

1. Climate variability including extremes

2. Climate-urban-water cyberinfrastructure

3. Design, operation, and risk of urban water infrastructure

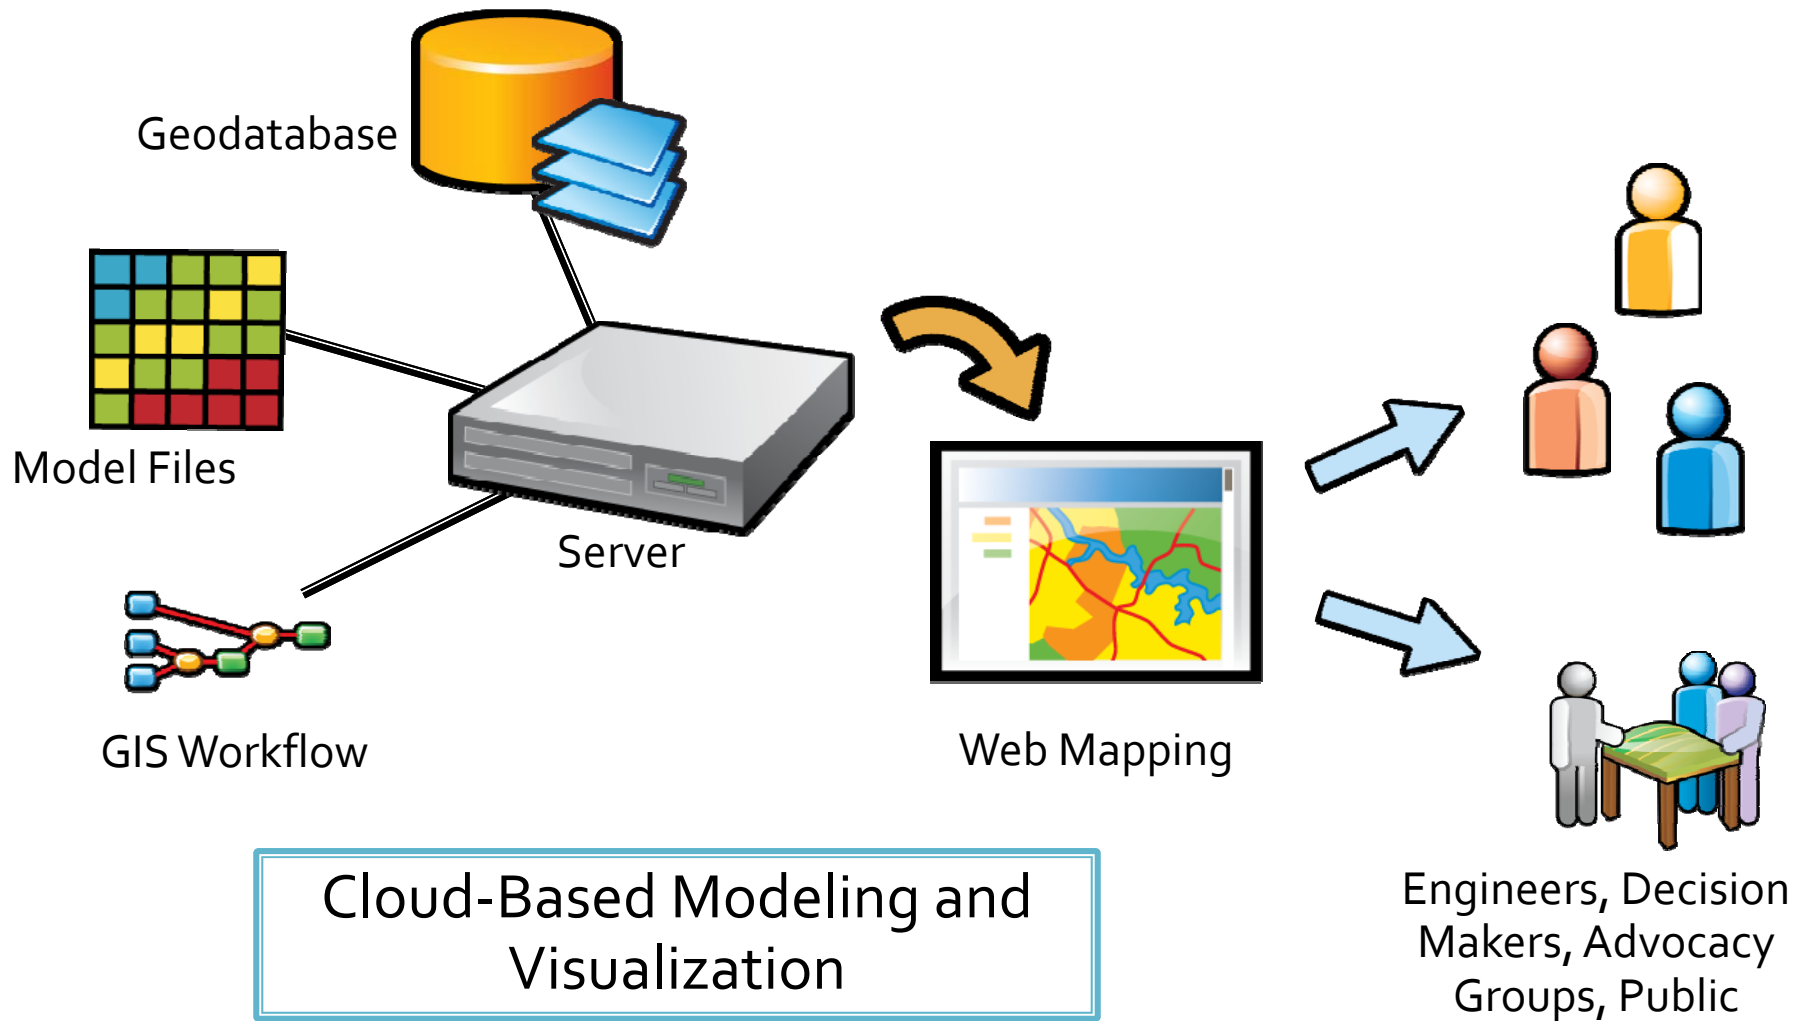

# UU Research Plans

- Develop software to quickly generate future meteorological (precip., temp., etc.) scenarios
- Link climate simulation results to urban water systems models
- Analyze urban water system response to climate variability and the associated adaption costs

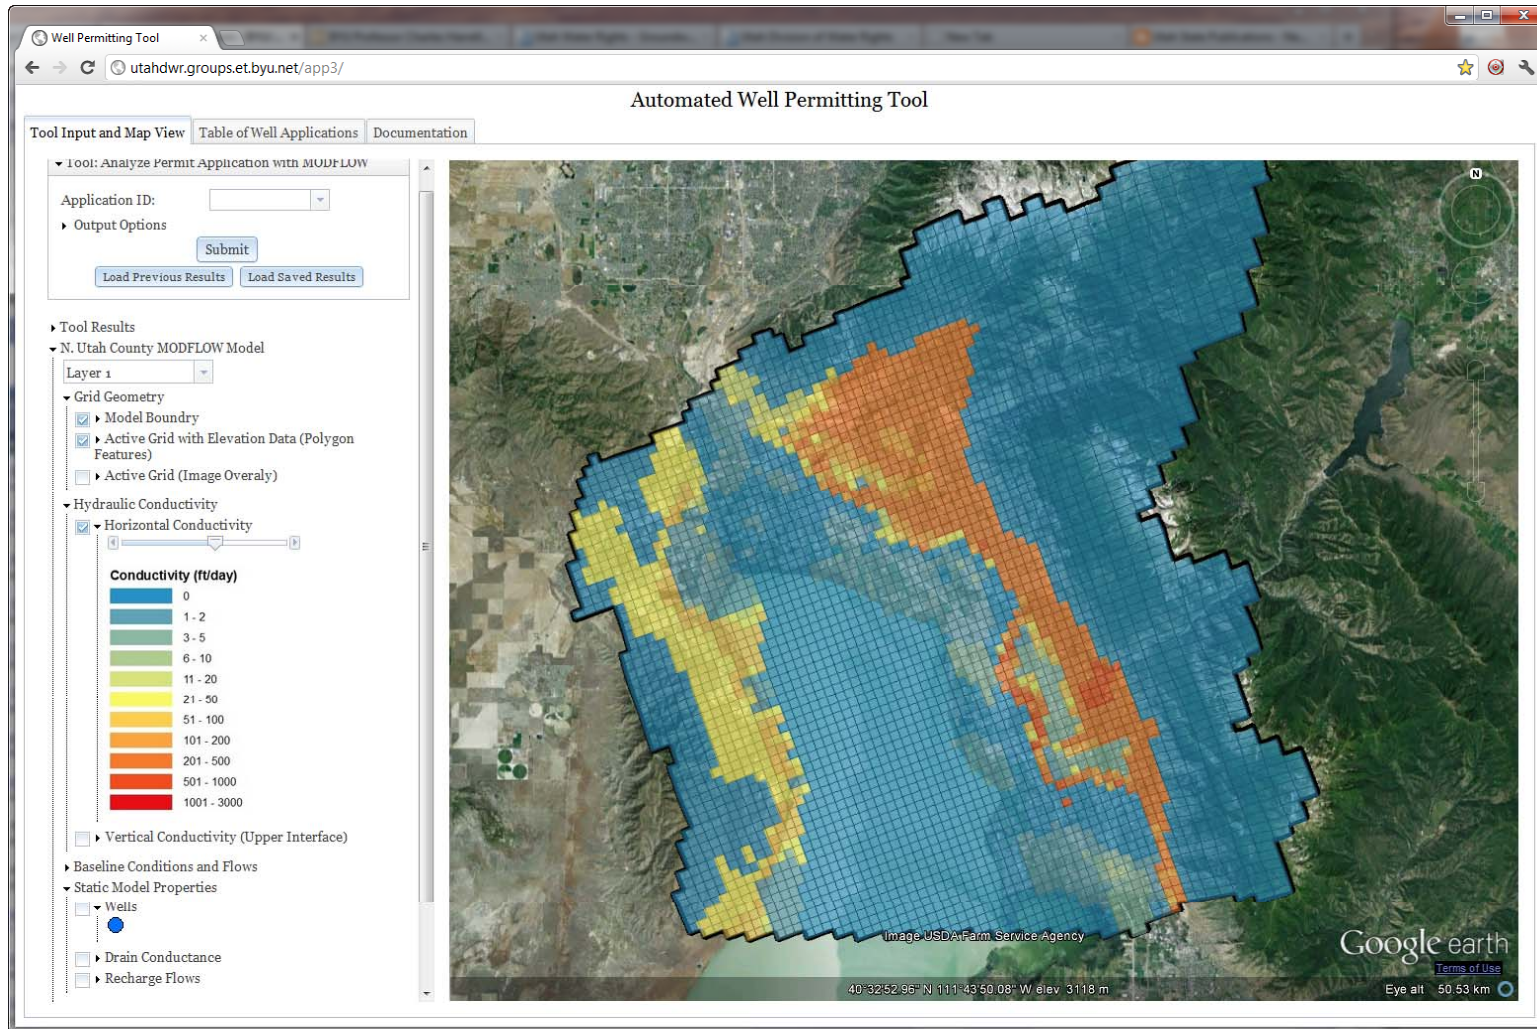

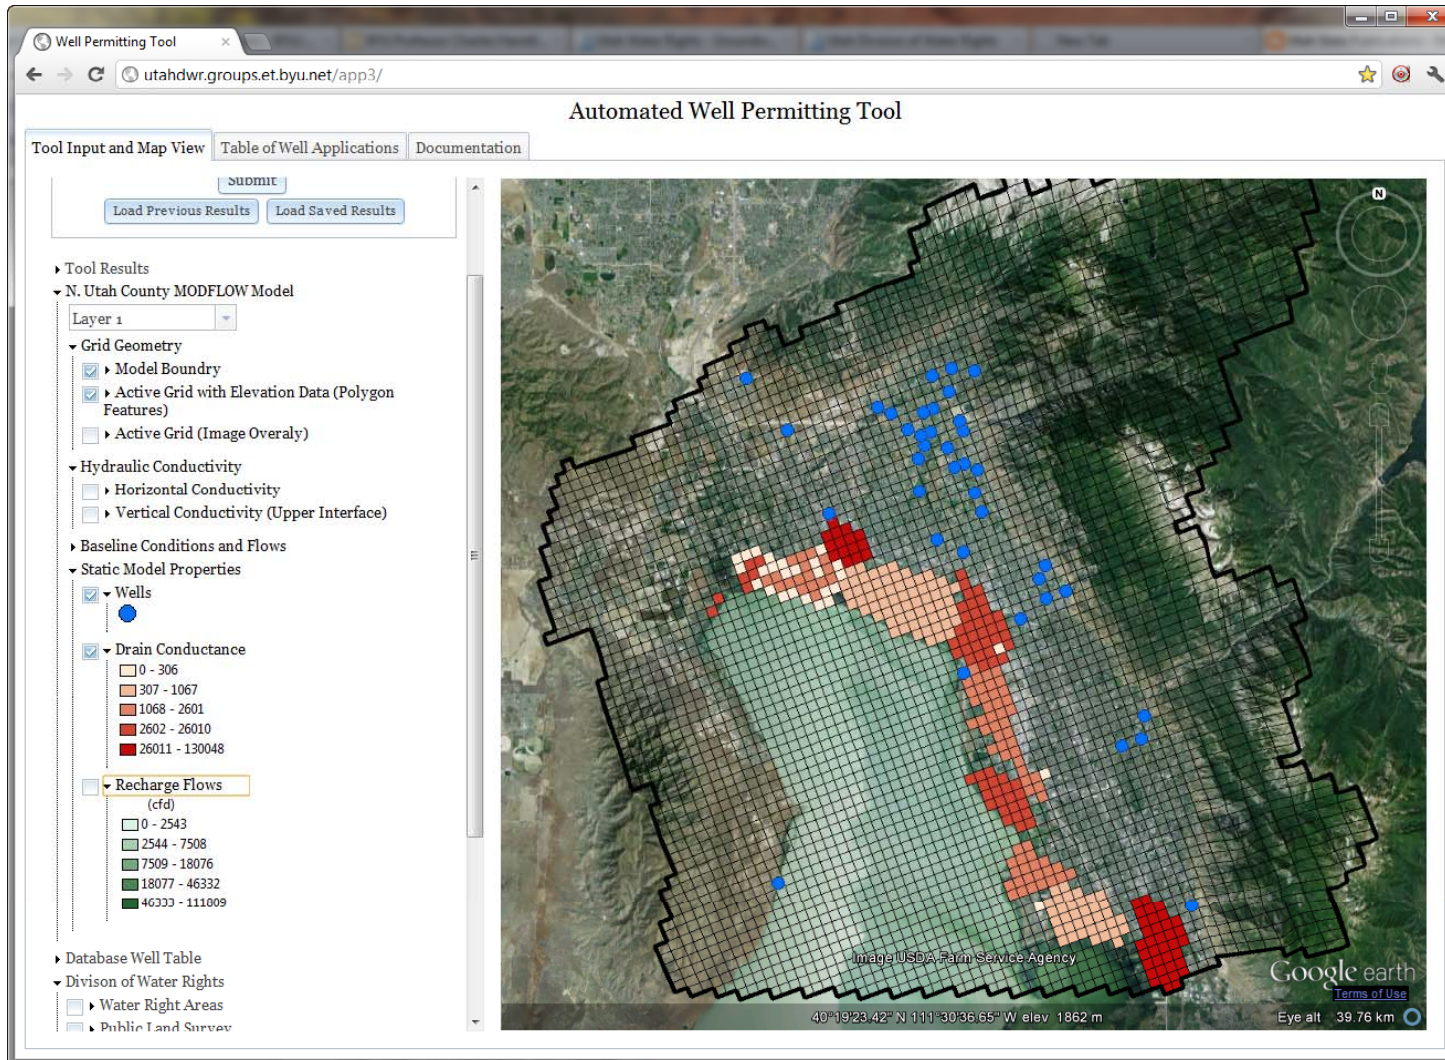

# Modeling and Visualization Tools - BYU

# UDWR Web-Based Simulation Tool

# Static Model Data

# Map Layers from UDWR Server

Well Permitting Tool

UNIVERSITY  
OF WYOMING  
*New Thinking*

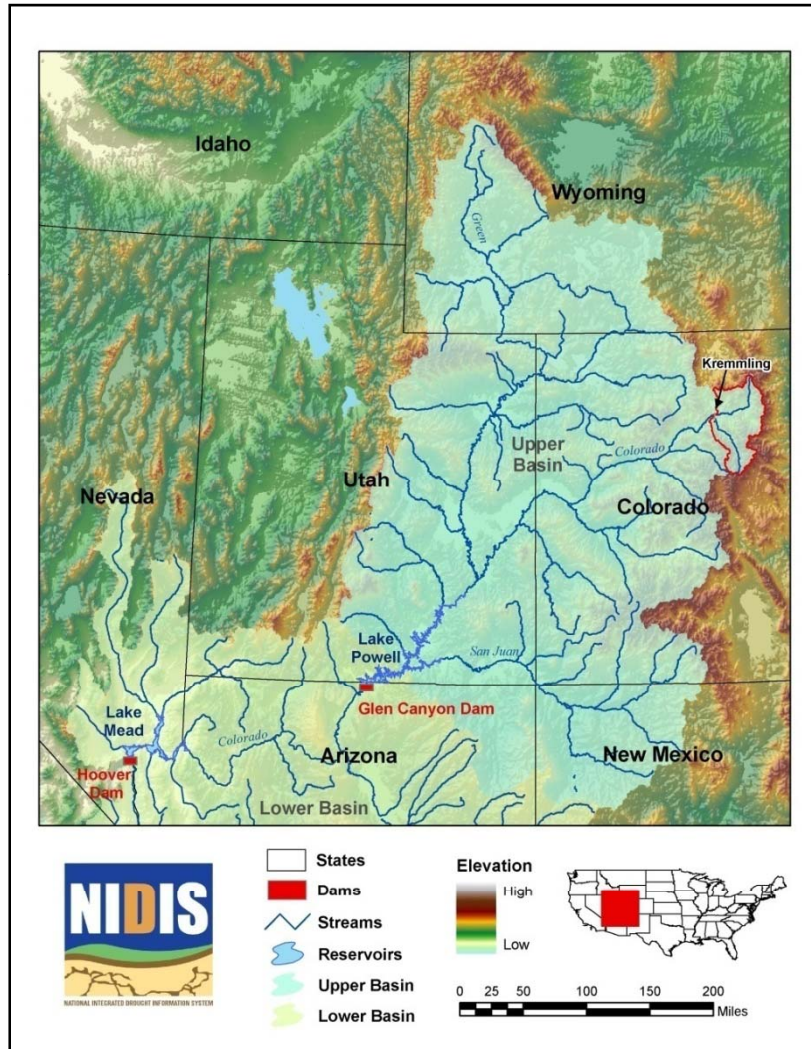

# Objective #3

Advance high-resolution multi-physics watershed modeling

# CI-WATER Component 3 Objective

- Develop a high-resolution, large-scale hydrologic model to answer three questions:
  - What are the potential impacts of climate change on the long-term yield of water from the upper Colorado River basin?
  - How will future land-use changes due to development and natural causes such as fire, pine bark beetle affect water supplies?
  - What are the effects of trans-basin diversions and increases in water consumptive use on the water storage in Lake Powell in 50 years?

# Upper Colorado River Basin

Basin Area: 288,000 km<sup>2</sup>

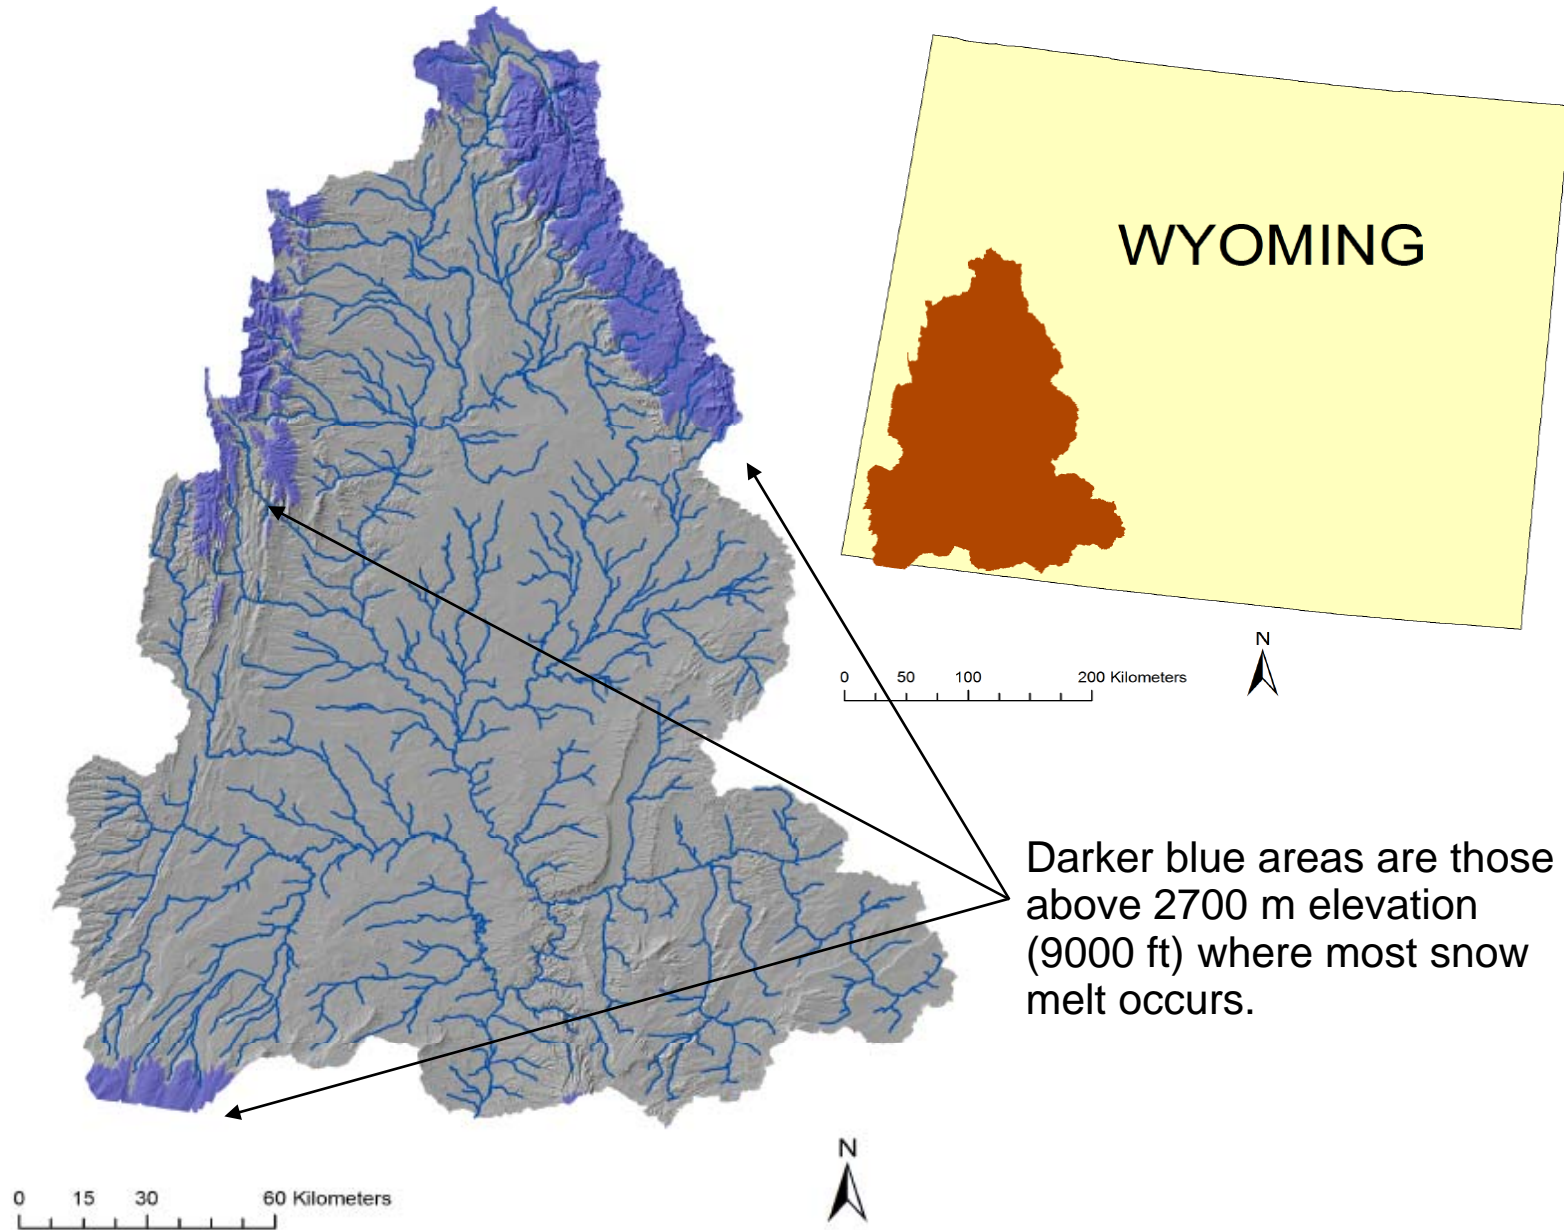

Streams: 467,000 km

Population: 400,000 (est)

Area above 2700 m: 14.5%  
(9,000 ft)

Area above 3050 m: 3.2%  
(10,000 ft)

# *Test Area: Green River Basin in Wyoming*

# Leveraging – Model Development

- USACE-ERDC providing:
  - Finite element computational kernel derived from ADH model
  - Computational model builder (CMB)
  - ezVIZ HPC visualization tools
  - ezHPC user interface toolkit

# Objective #4

Promote STEM learning and water science engagement

# Outreach Program

Laura Hunter, UEN

## K-12 Students and Teachers

- Science Teacher Workshop at UofU
- New curriculum & student interactives
- Student Field Research
- Teacher Toolkits

## Higher Education and Water Agency Professionals

- Annual Symposia
- HydroInformatics Distance Education Course
- Publications
- Presentations
- Shared data sets and models

## Adult Learners

- Broadcast Water Week programs in Utah and Wyoming
- Updated website
- Film Screenings with science panel discussions
- Call-in broadcast program with Science panel in Wyoming

STEM Careers

Reports & Results

## Community: Learn More

**CI-WATER will enhance STEM learning and water science engagement:**

- Foster STEM learning through coordinated K-12 activities between Wyoming and Utah.
- Foster collaborative research and strategic partnerships among institutions, junior faculty, students and industry professionals.
- Engage the general public and increase cyber-literacy and regional water understanding.

### Long-term Impacts and Outcomes:

- New collaborative online course in Hydroinformatics
- Greater public awareness of water issues and water science
- Programming challenges, code camps, and summer of code opportunities for students
- Production and national distribution of new curricula and resources including CI-WATER toolkits
- Increased networking and collaboration among water researchers, students, water industry professionals and the general public.

### STEM Learning and Water Science Engagement

- [Laura Hunter \(UU\)](#)
- [Beth Cable \(UWYO\)](#)
- [Rudy Calvert \(WY PBS\)](#)
- [David Rosenberg \(USU\)](#)
- [Norm Jones \(BYU\)](#)
- [Madlyn Runburg \(UMNH\)](#)
- [Louisa Stark \(UU\)](#)

# Project Status

- Student Recruitment
- Planning
- Outreach
- First Annual Meeting in September

# BYU

- Continued planning and recruiting
- 1 Post-Doc starting next week
- 2 PhD students engaged in early work and planning
- Further application of DWR well permitting
- Development of GSSHA geodatabase model
- Rolling out Agile database management for all parties to use.

# Agile Program Management

Sprint Backlog Burndown Team: Data & Modeling Services

**CI-WATER** An EPSCoR Project

### Burndown

School:  Person:

Burndown

The burndown chart displays the percentage of work remaining over the course of the sprint. The y-axis represents 'Percent Remaining' from 0 to 100. The x-axis represents dates from 4 June to 29 June. The chart shows a steady decline in work remaining, starting at 100% on 4 June and reaching approximately 45% by 29 June. The area under the line is shaded in light green.

- 1 Post Doc to start in August
- 1 PhD student recruited to start in August
- Working with SLC Public Utilities to apply their climate – water resources modeling tools.
- Developing plans

# USU

- Two PhD's recruited (1 in July, the other in transition from an MS)
- Programmer/Analyst hired to start mid July
- HubZero evaluation for hosting tools
- General access from modeling data to HIS being evaluated
- Modeling workshop Aug. 9-10 to explore other aspects of data management and model integration.

# Wyoming

- Writing specifications for the UW cluster acquisition, developing a competitive bidding process, meeting with vendors, and soliciting bids.
- Writing job descriptions / hiring
- Hired two positions
- Meeting with Army Corps to develop collaborations
- Planning with UW team
- Discussion, planning for suitable map projection

# Thank you

**Norm Jones**
